

BARN LIGHT ELECTRIC FINISHES

Our collection of finish options helps our shades and fixtures embrace the perfect look. Choose from our signature porcelain, powder coat, and natural metal finishes to create a unique look for your project! Please Note: Certain fixtures are offered with a limited number of finish options. Refer to a light's individual spec sheet for a list of its available finishes.

POWDER COAT FINISHES

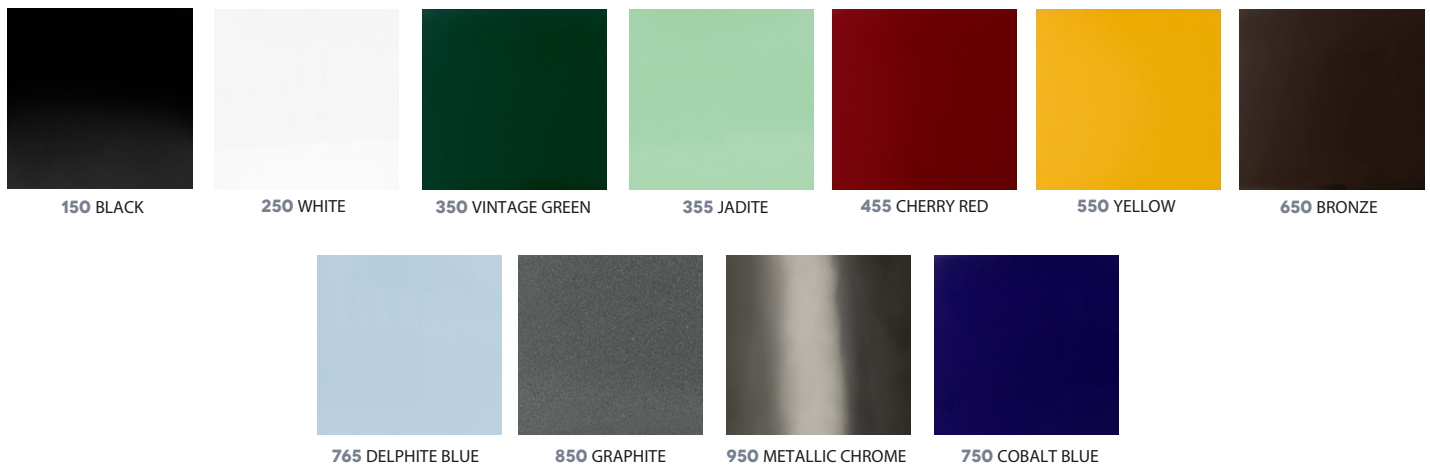

Ranging from bright and lively to more subdued colors, we offer powder coat finishes complementing every space. Finishes Textured Black, Rust, and Oil-Rubbed Bronze have a subtle textured look and feel. All powder coat finishes feature a white interior, apart from Painted Aged Copper, Painted Aged Brass and Galvanized. Additionally, Matte White includes a matte white interior finish.

PORCELAIN FINISHES

Applied by hand in our Florida-based manufacturing facility, multiple layers of porcelain enamel glass give our shades a unique high-gloss appearance and the protection they need in outdoor and commercial settings. Each solid steel shade is fired in a high-temperature oven, a process that forms a permanent bond between the porcelain and metal.

To complete their signature look, all porcelain shades feature a white interior and a black ring around the outer rim. A vast assortment of finish colors helps our shades adhere to any space's look.

NATURAL METALS

Nearly every light we produce — including our RLM shades and bare bulb fixtures — can be completely reimagined with elegant copper and brass! These metals supply our lighting designs with a timeless, sophisticated character. Hand-crafted from solid pieces of metal, these lights demonstrate our sincere commitment to quality.

Both copper and brass are available with stylish finish options, which are intended to enhance the metals' natural charm.
